ASSIGNMENT 3

LOAN APPLICATION REPORT DOCUMENTATION

NAME: RAGAVI N

ROLL NO: 240701407

DEPT: CSE

1. Objective

To create and configure reports in Zoho Creator that organize loan application records, support filtering by applicant-related fields, allow status updates in a spreadsheet-style view, and display application progress in a Kanban board.

2. Reports Created

2.1 All_Loan_Applications_List

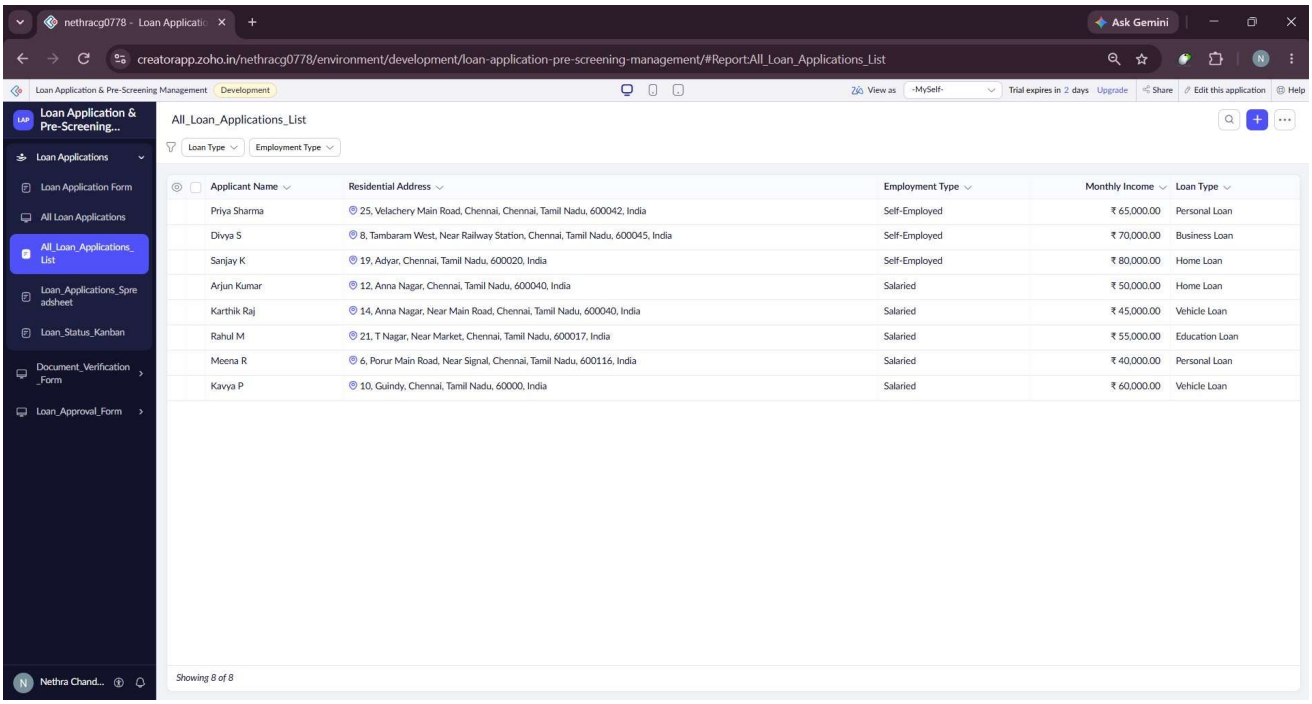

Report type: List View

Purpose: Displays loan application records in a tabular list so users can review applicant information.

Visible fields include Applicant Name, Residential Address, Employment Type, Monthly Income, and Loan Type.

Quick filters are available for Loan Type and Employment Type. The Employment Type filter can be used to narrow the displayed records, as shown in the captured view.

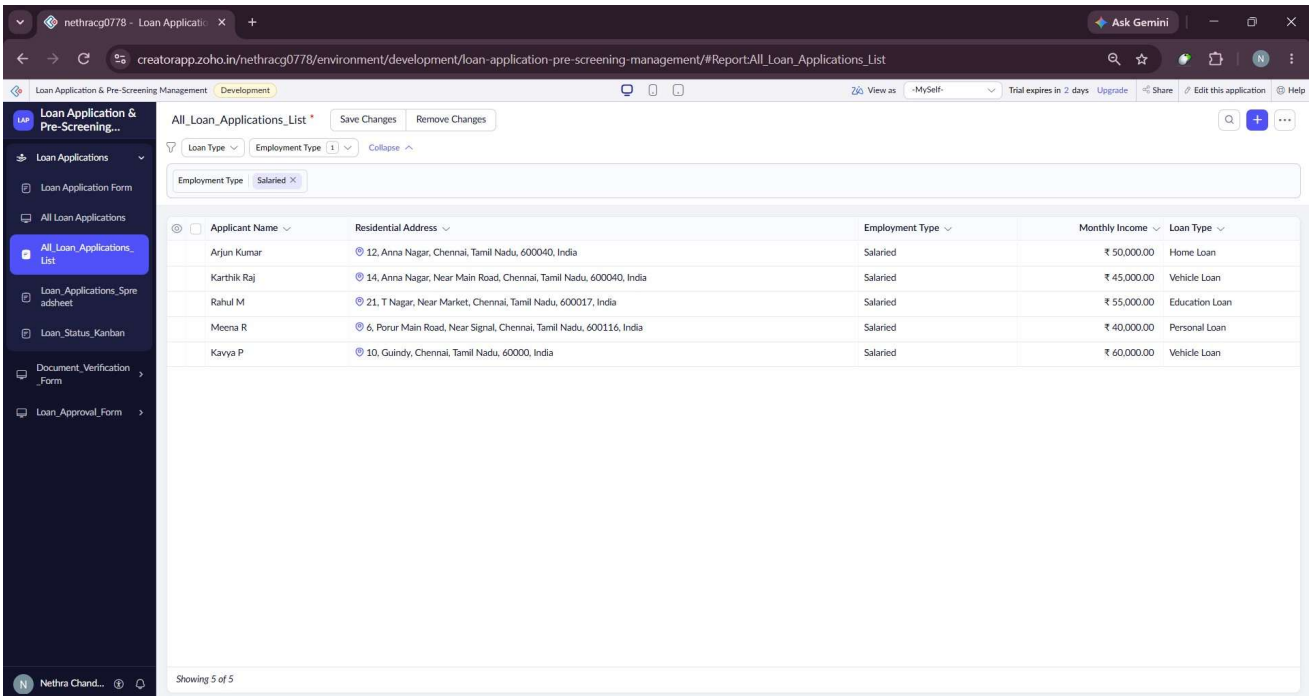

Figure 1. All Loan Applications List report

2.2 Filtered List View

The list report supports filtering. In the example shown, the Employment Type filter is set to Salaried, and the report displays only records matching that selection.

Figure 2. List report filtered by Employment Type

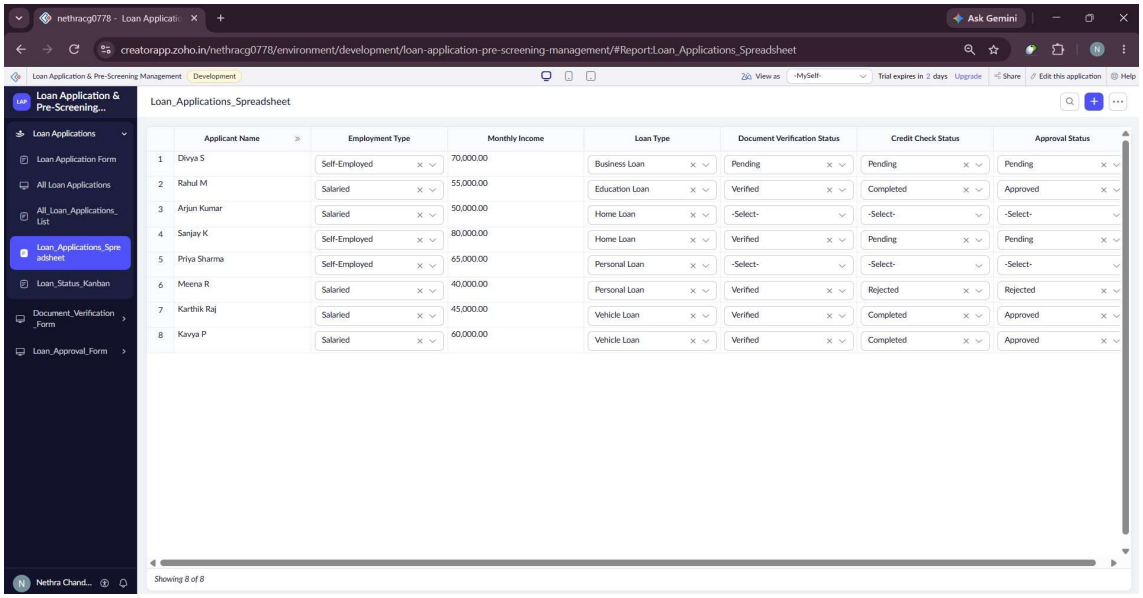

2.3 Loan_Applications_Spreadsheet

Report type: Spreadsheet View

Purpose: Shows loan application records in rows and columns and supports inline changes to selected dropdown fields.

Visible fields include Applicant Name, Employment Type, Monthly Income, Loan Type, Document Verification Status, Credit Check Status, and Approval Status. The status fields can be updated directly in the report where editing is permitted.

Figure 3. Loan Applications Spreadsheet report

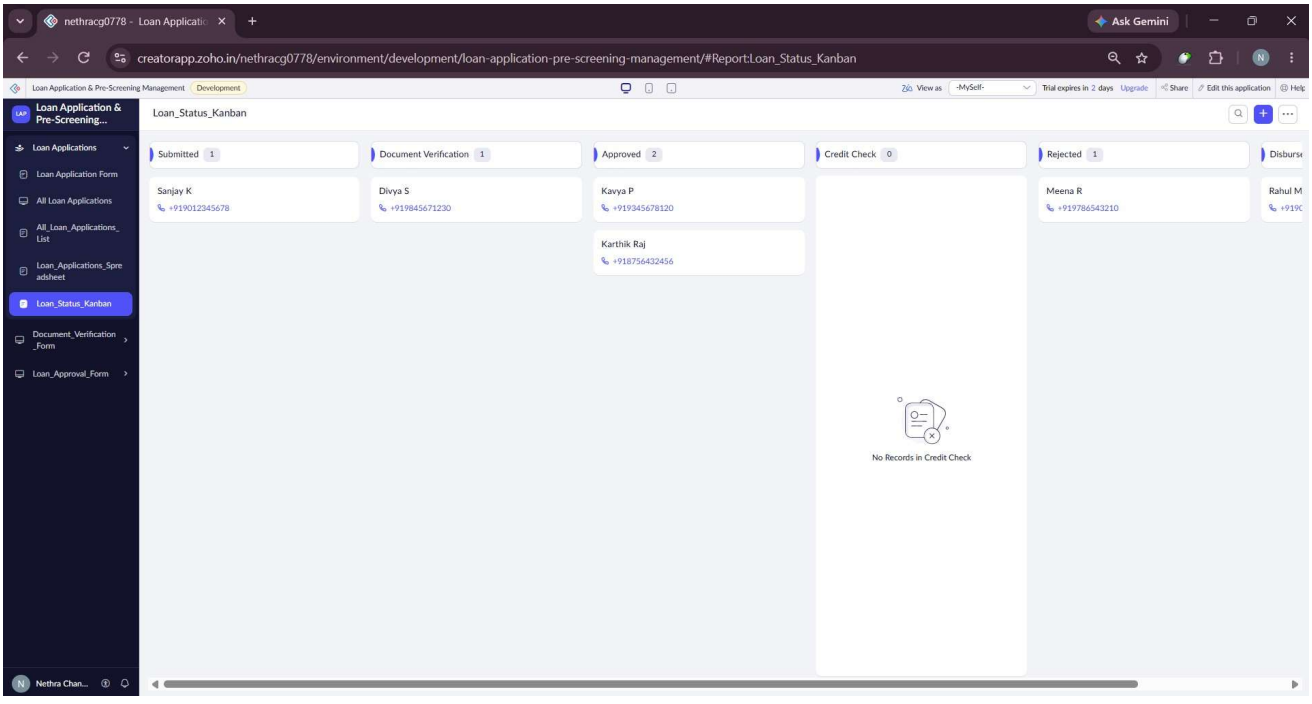

2.4 Loan_Status_Kanban

Report type: Kanban View

Purpose: Organizes applications into columns based on Application Status, helping users see the current stage of each application.

The displayed status columns include Submitted, Document Verification, Approved, Credit Check, Rejected, and Disbursed. Each card displays applicant details, including the applicant name and phone number. Figure 4. Loan Status Kanban report

3. Testing and Observations

- Sample loan application records were submitted through the Loan Application Form.
- The List View displays submitted records and allows filtering by Loan Type and Employment Type.
- The Spreadsheet View displays applicant and status information in a table layout.
- The Kanban View organizes records by Application Status and shows record counts for the visible columns.

4. Outcome

The application now contains three report views: a List View for browsing and filtering records, a Spreadsheet View for reviewing and updating selected status fields, and a Kanban View for monitoring application stages. These views make the loan application data easier to review and manage.

5. Conclusion

The assignment demonstrates the use of different report layouts in Zoho Creator. The List, Spreadsheet, and Kanban reports provide complementary ways to view application details, filter records, and track loan application progress.
