ASSIGNMENT – 04

BANK LOAN APPLICATION COMMAND CENTER

PAGE BUILDER – DASHBOARD IMPLEMENTATION

NAME: RAGAVI N | ROLL NO: 240701407 | DEPT: CSE

1. Objective

To design a command-center dashboard in Zoho Creator for the Loan Application & Pre-Screening Management application. The page combines summary panels, a gauge, a chart, and a board in one workspace, helping loan officers review application volume, requested loan amounts, loan-type distribution, and grouped application records.

2. Application Overview

Application Name	Loan Application & Pre-Screening Management
Page Name	Loan_Command_Center_Page
Platform	Zoho Creator
Data Source	Loan Application Form
Primary Users	Loan Officers and Branch Management

3. Dashboard Elements Implemented

3.1 Summary Panel – Total Loan Amount Requested

The first summary panel displays the aggregate amount requested across the loan application records. The current dashboard shows ₹75,00,000.00. This provides a quick view of the total requested loan value.

3.2 Summary Panel – Total Loan Applications

The second summary panel displays the total number of loan application records. The current sample data shows 8 applications.

3.3 Summary Panel – Application Status

The third summary panel displays a count associated with the Application Status field. The current dashboard shows 1 for the selected status grouping/value displayed by the panel.

3.4 Gauge – Application Record Count

A gauge element is configured with the Loan Application Form as its data source and Count as the displayed data. It currently displays 8, representing the number of records in the form. A target-based gauge can be configured later if a monthly disbursal target field or target value is available.

3.5 Pie Chart – Loan Type Distribution

A pie chart visualizes the distribution of loan applications by Loan Type. The legend displays Personal Loan, Home Loan, Education Loan, Vehicle Loan, and Business Loan. Each segment represents a loan category, making the mix of application types easy to compare visually.

3.6 Board – Grouped Application Records

A Board element uses the Loan Application Form and groups records by Employment Type in the current configuration, while the board heading is "Order Status." The visible cards show Vehicle Loan, Home Loan, and Education Loan with counts. Since the visible cards are loan types, the grouping/heading should be checked in the editor if the intention is to show employment categories or application status stages.

3.7 Bar Chart – Number of Applications by Loan Type

A horizontal bar chart uses Loan Type as the category and Count of Loan Type as the aggregate value. The horizontal axis is labelled "Number of Applications," and the chart compares application counts for Business Loan, Vehicle Loan, Education Loan, Home Loan, and Personal Loan.

4. Dashboard Layout

- Top row: total loan amount requested, total loan applications, and application-status summary.
- Middle row: gauge showing the record count and pie chart showing the loan-type distribution.
- Bottom row: board with grouped records and a horizontal bar chart comparing application counts by loan type.

5. Configuration and Data Source

The visible dashboard elements use the Loan Application Form as their data source. Summary panels and the gauge display aggregate values from the records. The pie and bar charts categorize records by Loan Type. The board groups records using the selected field. The values shown in this report are the values visible in the supplied dashboard screenshot and may change when application records are added or edited.

6. Dashboard Screenshot

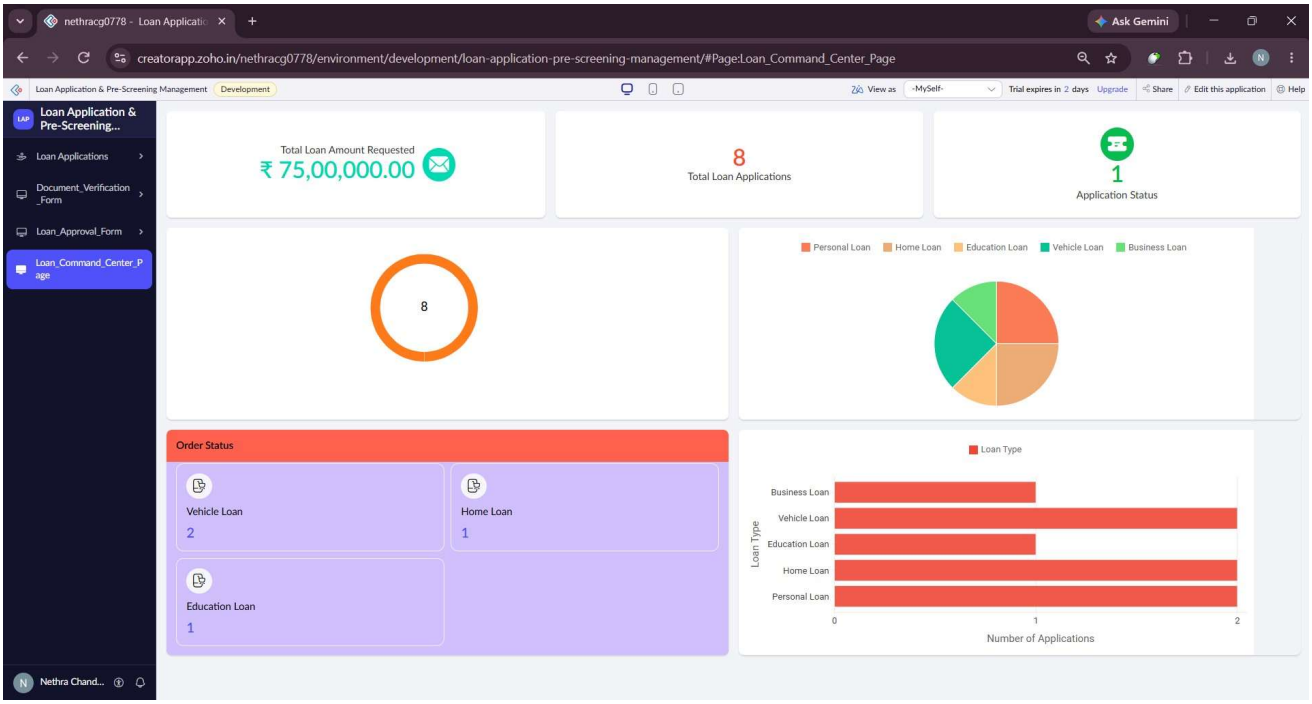

Figure 1: Loan Command Center Page showing summary panels, gauge, pie chart, board, and bar chart.

7. How the Dashboard Is Used

- Review the total requested loan amount and total application count from the top summary panels.
- Use the application-status panel for a quick status-related count.
- Check the gauge for the current total record count.
- Compare the loan categories using the pie chart and horizontal bar chart.
- Review the board for the distribution of records across its displayed groups.
- Open the relevant form or report when an individual application needs detailed review.

8. Learning Outcomes

- Learned to create and arrange dashboard elements in Zoho Creator Page Builder.
- Understood how summary panels and gauges display aggregated application data.
- Configured visual charts to represent loan-type distribution and application counts.
- Used a Board element to display grouped application records.
- Learned how a single command-center page can bring multiple views of application data together.

9. Conclusion

The Loan Command Center Page consolidates key loan application metrics and visual summaries into one page. The summary panels, gauge, pie chart, bar chart, and board help users review the current dataset quickly and identify how applications are distributed across loan types. The supplied screenshot is included as evidence of the dashboard layout and the elements currently visible.
