ASSIGNMENT 05

BANK LOAN APPLICATION AUTOMATION SUITE DOCUMENTATION

NAME: RAGAVI N
ROLL NO: 240701407
DEPT: CSE

1. Objective

To design and configure eight types of workflows in Zoho Creator to automate the loan application process, including application acknowledgement, document reminders, loan approvals, disbursal, EMI notifications and sanction letter generation.

2. Workflows Created

2.1 On_Application_Submit_Workflow

Workflow type: Form Workflow

Purpose: Automatically sends an acknowledgement email to the applicant and notifies the assigned loan officer whenever a new loan application is submitted.

Trigger: On Add of Loan_Application_Form.

2.2 Daily_Pending_Document_Reminder_Schedule

Workflow type: Schedule

Purpose: Identifies applications with incomplete KYC or income documents and sends reminder emails to applicants.

Frequency: Daily at 10:00 AM, with a maximum of five reminders per application.

2.3 HighValue_Loan_Approval

Workflow type: Approval

Purpose: Routes loan applications exceeding the specified loan amount threshold to the credit committee for approval or rejection.

Trigger: When the requested loan amount exceeds the configured threshold.

2.4 Loan_Disbursal_Payment_Workflow

Workflow type: Payments

Purpose: Initiates loan disbursal through a payment or bank-transfer integration after approval. Updates the disbursal status and stores the transaction reference.

Trigger: When the loan status changes to Approved.

2.5 Loan_Lifecycle_Blueprint

Workflow type: Blueprint

Purpose: Controls the loan application lifecycle through predefined stages and role-based transition permissions.

Stages: Submitted, Document Verification, Credit Check, Approved, Disbursed and Rejected.

2.6 Bulk_EMI_Reminder_Batch

Workflow type: Batch Workflow

Purpose: Identifies active borrowers whose EMI is due within the next three days and sends payment reminder emails in batches.

Frequency: Daily at 7:00 AM, with a default batch size of 200 records.

2.7 OnEdit_Recalculate_EMI_Workflow

Workflow type: Report Workflow

Purpose: Automatically recalculates the Estimated_Monthly_EMI whenever the loan amount or interest rate is modified directly through the report.

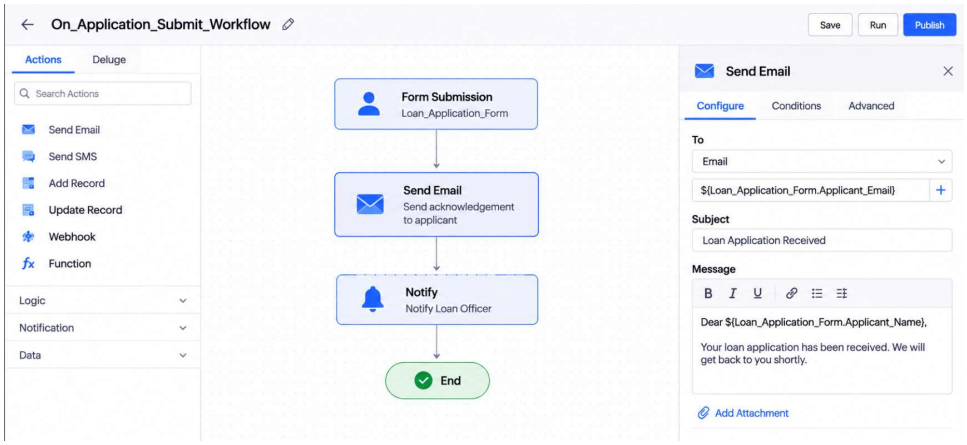

Trigger: On Edit of Loan_Application_Report.

2.8 Generate_Sanction_Letter_Function

Workflow type: Function

Purpose: Generates a loan sanction letter containing the approved loan amount, tenure and EMI details, and emails it to the applicant.

Invocation: Called automatically after loan approval and manually through a resend option.

3. Testing and Observations

- New loan applications trigger acknowledgement emails and loan officer notifications.
- Pending document applications are identified for scheduled reminders.
- High-value applications are routed to the credit committee for approval.
- Approved applications proceed to the disbursal process.
- The Blueprint controls loan stages through role-based transitions.
- EMI reminders are processed in batches for eligible borrowers.
- EMI values are recalculated when relevant loan details are edited.
- The sanction letter function generates and sends letters after approval.

4. Outcome

The application incorporates eight Zoho Creator workflow options: Form Workflows, Schedules, Approvals, Payments, Blueprints, Batch Workflows, Report Workflows and Functions. These automations reduce manual effort, improve loan processing and provide better control over the loan lifecycle.

5. Conclusion

The assignment demonstrates the implementation of different workflow automation options in Zoho Creator. The configured workflows automate notifications, document follow-ups, approvals, disbursal, EMI reminders and sanction letter generation, providing a structured and controlled loan application management process.
